What is 'MATH ON WEB' ?

Summary of 'MATH ON WEB'

- Target : College Mathematics (Linear Algebra and Calculus)
- **Consists of 2 systems: WMLS and WASM**
 - WMLS : Web-based Mathematics Learning System
 - WASM : Web-based Assessment System of Mathematics
- Background CAS = *webMathematica and Mathematica* (Wolfram)
- Used for after-class learning
- More than 1200 questions implemented

[WebMath - Solve Your Math Problem](#)

www.webmath.com/ ▼ このページを訳す

Webmath is a math-help web site that generates answers to specific math questions and problems, as entered by a user, at any particular moment. The math answers are generated and displayed real-time,

<http://www.las.osakafu-u.ac.jp/lecture/math/MathOnWeb/>

Screenshots

<http://www.las.osakafu-u.ac.jp/lecture/math/MathOnWeb/>

The screenshot shows the homepage of the MATH ON WEB system. At the top, a dark blue header contains the text "webMathematicaを利用した数学学習支援サイト". Below this, the main title "MATH ON WEB" is displayed in large black letters, with the subtitle "Learning College Mathematics by webMathematica" in blue. To the right of the title is the logo of Osaka Prefecture University and the text "大阪府立大学 大阪府立大学高等教育推進機構". A navigation menu below the title includes links for "webMathematicaとは", "Technical Notes", "使用方法", "教材開発研究", and "お問い合わせ".

Two main content areas are highlighted with colored boxes and labels:

- WMLS (WebMathematica Learning System):** A green-bordered box on the left. It contains the text "webMathematica 大学数学" and a description: "大学初年次の数学に関する「計算ドリル型教材」と「シミュレーション型教材」が利用できます。". Below this are two buttons: "大阪府立大学生はこちらから" (highlighted with a green box) and "その他の利用者はこちらから" (highlighted with an orange box). A red box labeled "For regular user(SSO)" is positioned below the buttons, with a green arrow pointing from the top button to it.
- WASM (WebAssessment System):** A yellow-bordered box on the right. It contains the text "数学到達度評価システム" and a description: "大学数学の学習内容の到達度をオンラインテストで評価します。". Below this are two buttons: "大阪府立大学生はこちらから" (highlighted with a green box) and "その他の利用者はこちらから" (highlighted with an orange box). A red box labeled "For guest user" is positioned below the buttons, with an orange arrow pointing from the top button to it.

At the bottom right, there is a logo for "webMATHEMATICA2" with the text "POWERED BY". A dark blue footer at the very bottom contains the text "Copyright© Osaka Prefecture University. All Rights Reserved.".

List of Learning Contents (WMLS)

Vector space

単元	問題	
Subspace	Def. of Subspaces(1)	部分空間の定義(2)
Linearly independency	Lin. ind'cy of num vectors (1)	数ベクトルの1次独立性(2)
	Lin. ind'cy of polynomials	
Dimension and Basis	空間内の平面の基底	生成される部分空間の次元と基底(3)
	生成される部分空間の次元と基底(3)	生成される部分空間の次元と基底(3)
	解空間の次元と基底(2)	部分空間の和(1)
	部分空間の共通部分(1)	部分空間の共通部分(2)

解空間の次元と基底(1) Problems list

次の行列Aに対し、Vを連立一次方程式Ax=0の解全体のなすR³の部分ベクトル空間とする。

問1. $A = \begin{pmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{pmatrix}$

問2. $A = \begin{pmatrix} 1 & 1 & 1 \\ 1 & 1 & 2 \\ 1 & 1 & 3 \end{pmatrix}$

問3. $A = \begin{pmatrix} 1 & 1 & -1 \\ 2 & 2 & -2 \\ -1 & -1 & 1 \end{pmatrix}$

問4. $A = \begin{pmatrix} 1 & 1 & 3 \\ 1 & -1 & -1 \\ 2 & -1 & 2 \end{pmatrix}$

問5. $A = \begin{pmatrix} 1 & 0 & 1 \\ 0 & 1 & 1 \\ 2 & -1 & 1 \end{pmatrix}$

Dim of and basis for the solution space

3元斉次連立1次方程式の解空間

問1.

$A = \begin{pmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{pmatrix}$ に対し、Vを連立一次方程式Ax=0の解全体のなすR³の部分ベクトル空間とする。

Vの次元と基底を求めよ。

解答欄：次元は ，基底は $\left\{ \begin{pmatrix} \square \\ \square \\ \square \end{pmatrix}, \begin{pmatrix} \square \\ \square \\ \square \end{pmatrix}, \begin{pmatrix} \square \\ \square \\ \square \end{pmatrix} \right\}$

基底を構成するベクトルが3個より少ないときは、余ったベクトルの欄は空欄にすること。
次元が0のときは、基底の欄は空欄にすること。

The system summary

Find a basis and the dimension for the solution space of the following system of linear equations.

$$\begin{pmatrix} 1 & 2 & 3 \\ 2 & 4 & 6 \\ 3 & 6 & 9 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$$

$$\text{Basis} = \left\{ \begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix} \right\}, \text{Dim} = 1$$

Check List

- 1) #Basis=Dim?
- 2) Appropriate Vectors in Basis?
 - No zero vector?
 - Inside the space?
 - Linearly independent?
- 3) Correct Dim?

Student

Basis? $\begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix}$? ?
Dimension=1?

"Dim is incorrect."
Try again?
or Give up?

Web-based Learning System

etc...

Features of WMLS and WASM

WMLS Key feature:

- WMLS is a **self-learning system**.
- WMLS consists of the drill section and the **simulation** section.
- The system has over 200 learning units and each unit consists of 5 problems. (Over **1000** problems!)
- Each learning unit is equipped with a problem example and its model answer in PDF format.
- There is no assessment mode, no time limit.
- Students can retry the same problems repeatedly until they get correct answers.
- The **correct answer is never shown**.

WASM Key feature:

- WASM is an **online assessment system**.
- Assessment mode and **drill mode** have been implemented.
- Assessment materials are associated to the learning units.
- Problems are **randomly** generated.
- Answer **time limits** are set in all problems in an assessment mode.
- The **correct answer is never shown**.
- No simulation section.

Motivation

To develop the students' understanding of the students,
we want to support and promote after-class learning.

To support after-class learning,
we thought web-based system might be appropriate.

We wondered how to develop a web-based simulation system,
webMathematica 1.0 was launched timely (2002).

The merits of the drill system

- Paper-based exercise ... students want to know the answer.
- There are some questions which have non-unique answer ... CAS can handle such cases with appropriate program.
- The program not only can judge the correctness, but also can respond appropriate feedback message to the students.

Feedback samples

Find a basis and the dimension for the solution space of the following system of linear equations.

$$\begin{pmatrix} 1 & 2 & 3 \\ 2 & 4 & 6 \\ 3 & 6 & 9 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$$

$$\text{Basis} = \left\{ \begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix} \right\}, \text{Dim} = 2$$

Number of vectors in Basis does not equal Dim. See the definition of Basis and Dim.

$$\text{Basis} = \left\{ \begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix}, \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \right\}, \text{Dim} = 2$$

Basis contains the zero vector. See the definition of Basis.

$$\text{Basis} = \left\{ \begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix}, \begin{pmatrix} -2 \\ 4 \\ -2 \end{pmatrix} \right\}, \text{Dim} = 2$$

Vectors in Basis are linear dependent. See the definition of Basis.

$$\text{Basis} = \left\{ \begin{pmatrix} 1 \\ -2 \\ 1 \end{pmatrix}, \begin{pmatrix} 2 \\ -1 \\ 0 \end{pmatrix} \right\}, \text{Dim} = 2$$

Good!

$$\text{Basis} = \left\{ \begin{pmatrix} 3 \\ 0 \\ -1 \end{pmatrix}, \begin{pmatrix} 0 \\ 3 \\ -2 \end{pmatrix} \right\}, \text{Dim} = 2$$

Good!

Check List

- 1) #Basis = Dim ?
- 2) Appropriate Vectors in Basis ?
 - No zero vector ?
 - Inside the space ?
 - Linearly independent ?
- 3) Correct Dim ?

Project and related history

- 2002 pre-WMLS(Simulation) was developed with *webMathematica* 1.0
- 2003 pre-WMLS(Drill type) was developed with *webMathematica* 1.0
- 2005 STACK 1.0 was launched.
- 2005 Practical use of pre-WMLS for all students started.
- 2009 WMLS was developed with support by MEXT(2009-2011).
- 2012 WASM was developed with support by MEXT(2012-2013).
- 2013 Tentative use of WASM started.
- 2014 Practical use of WASM started.
- Oct 2014 STACK 3.x became available in our university!!

MEXT : Ministry of Education, Culture, Sports, Science and Technology, Japan

Practical use of the systems

Learning environment with WMLS

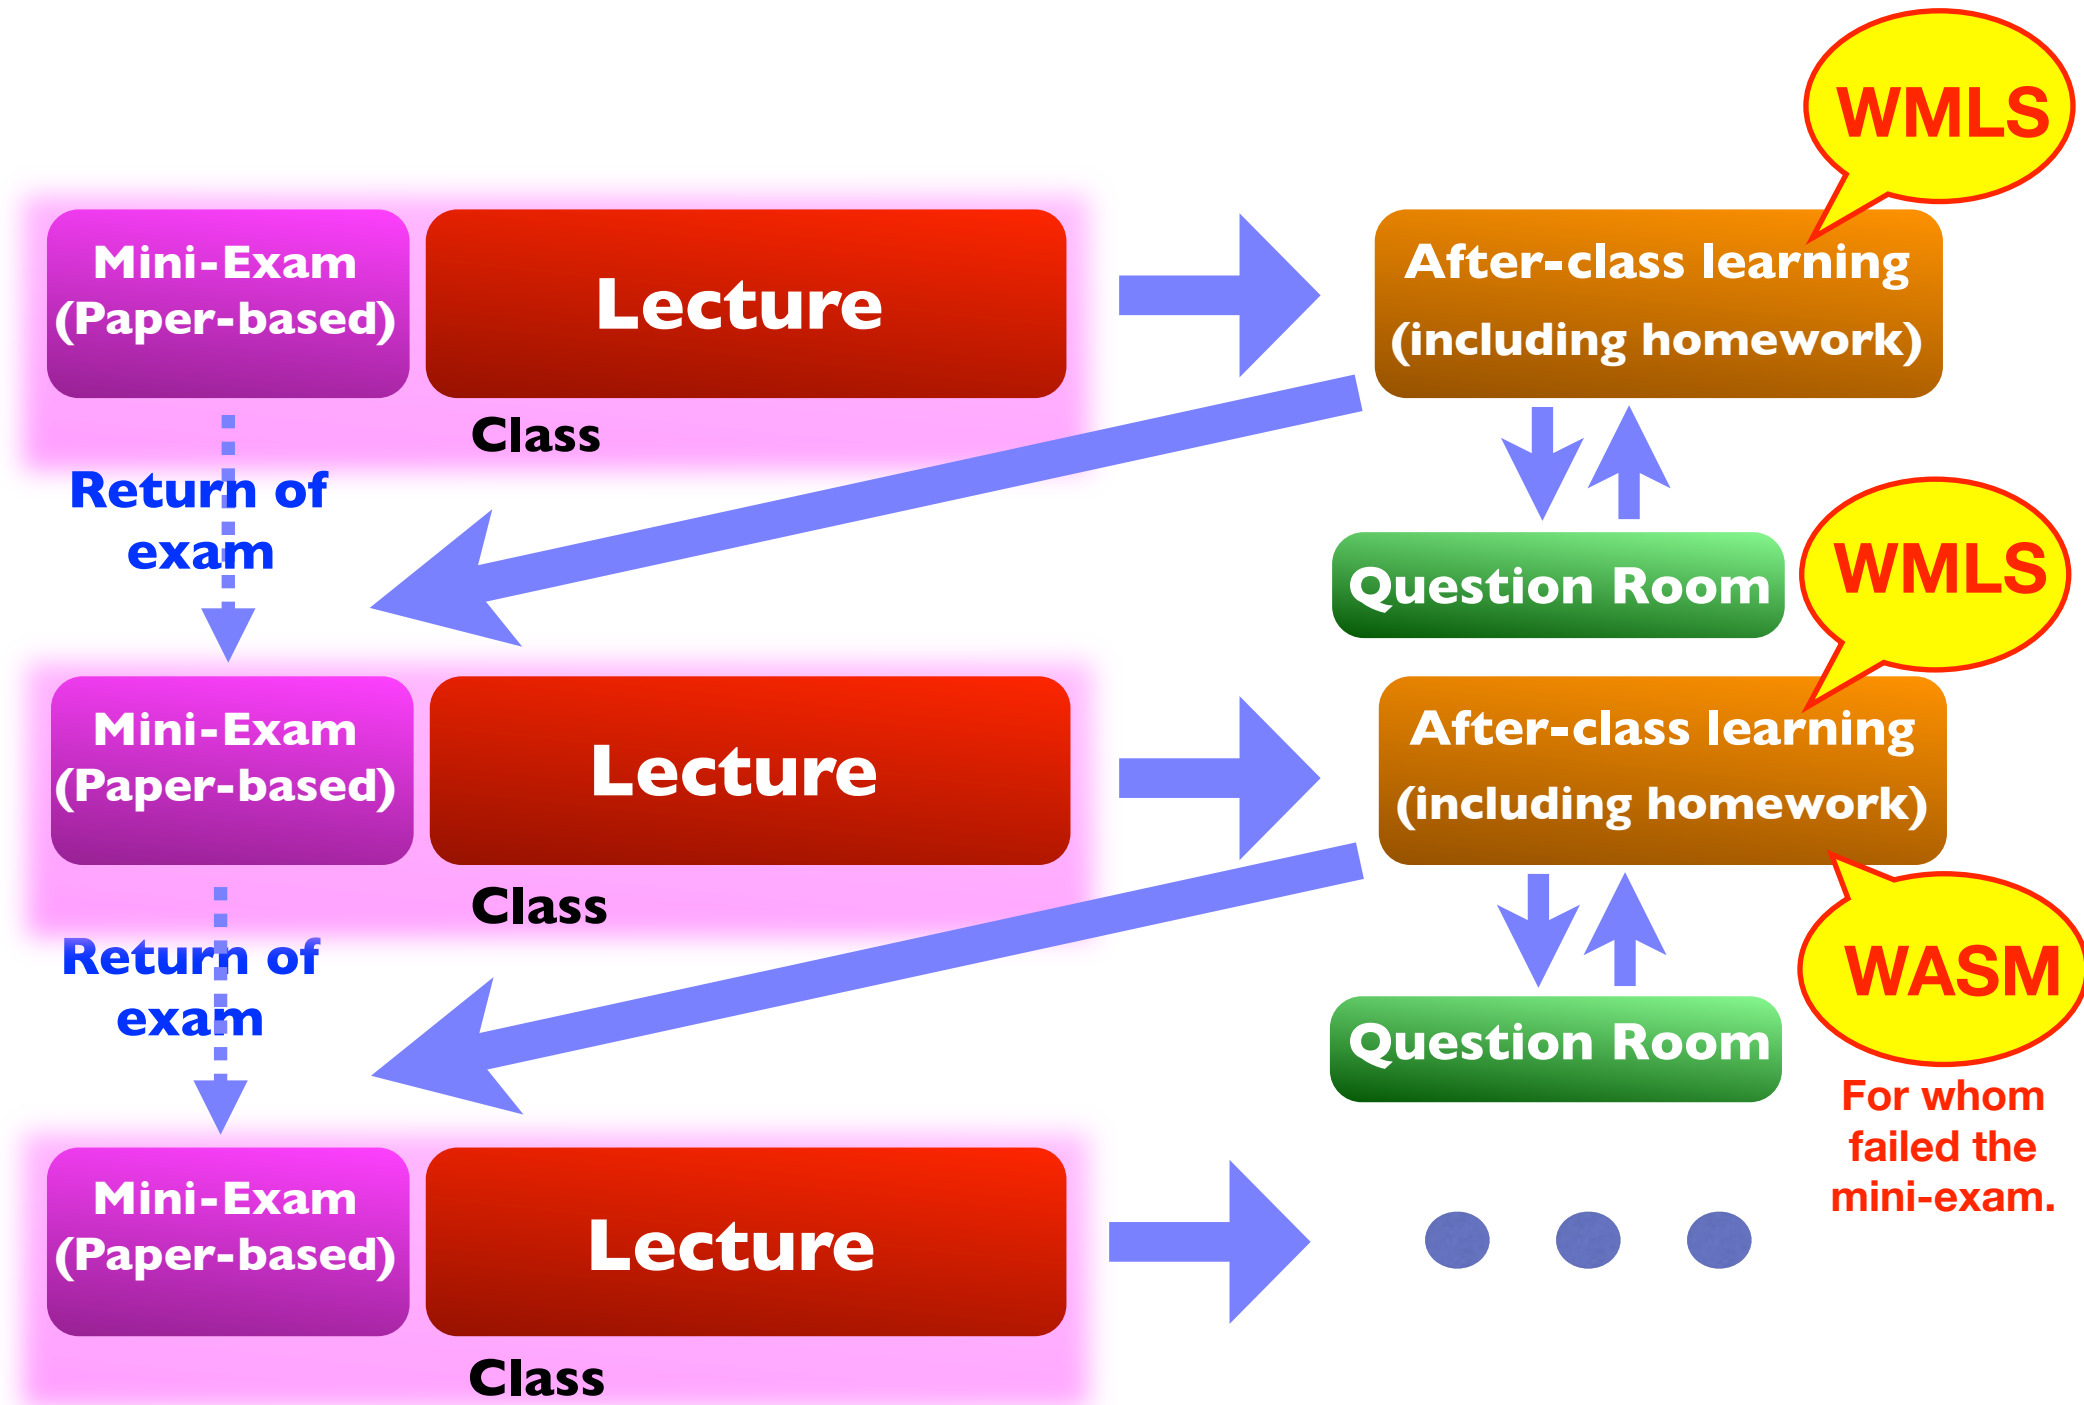

We use WMLS :

1. In all the classes of linear algebra and calculus.
2. As a tool for after-class learning.
3. To complement the regular class activities.
4. Combined with public office hour (in a designated room(*))

Teachers not compel but recommend the students to use the system.

(*) We call this room “*Question Room*”, opened regularly in the semesters afternoon.

Example class with 'MATH ON WEB'

Effectiveness - Log analysis -

The number of users (WMLS and WASM)

Number of users(AY2008-AY2014)

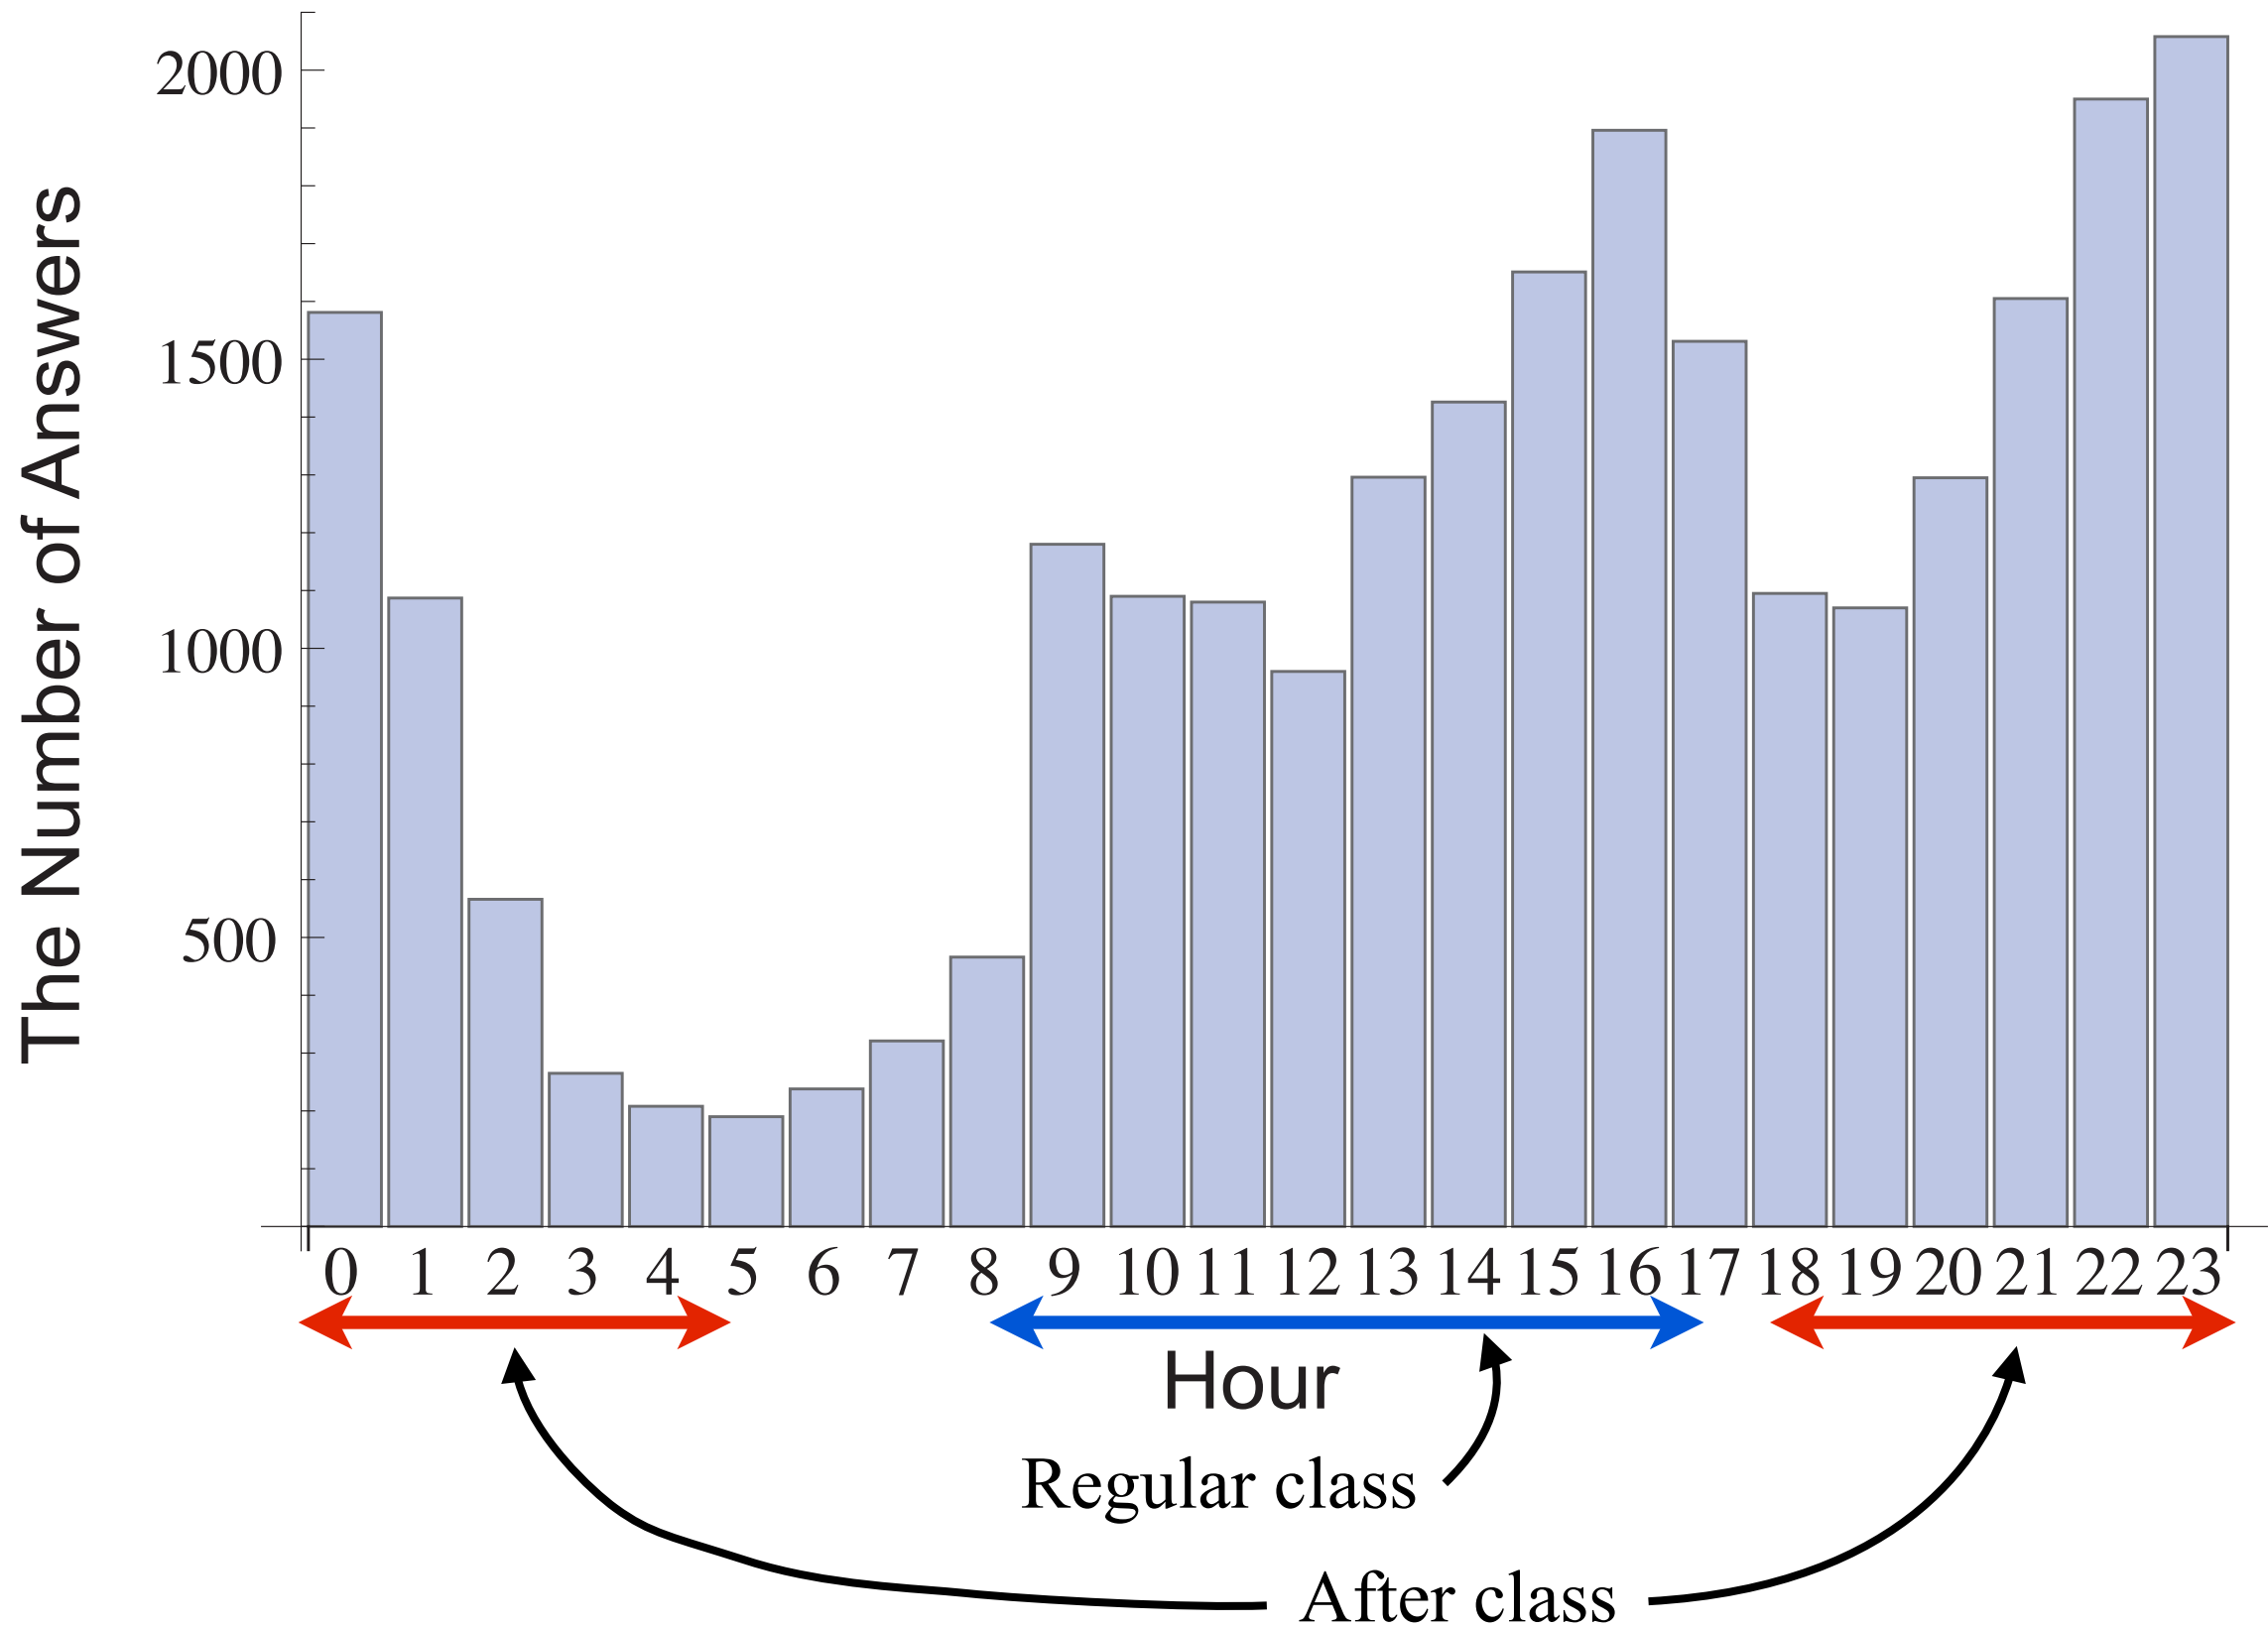

- * WMLS is since 2009
- * Up to AY2012, WMLS only.
- * Data of AY2014 is at 1/19/2014

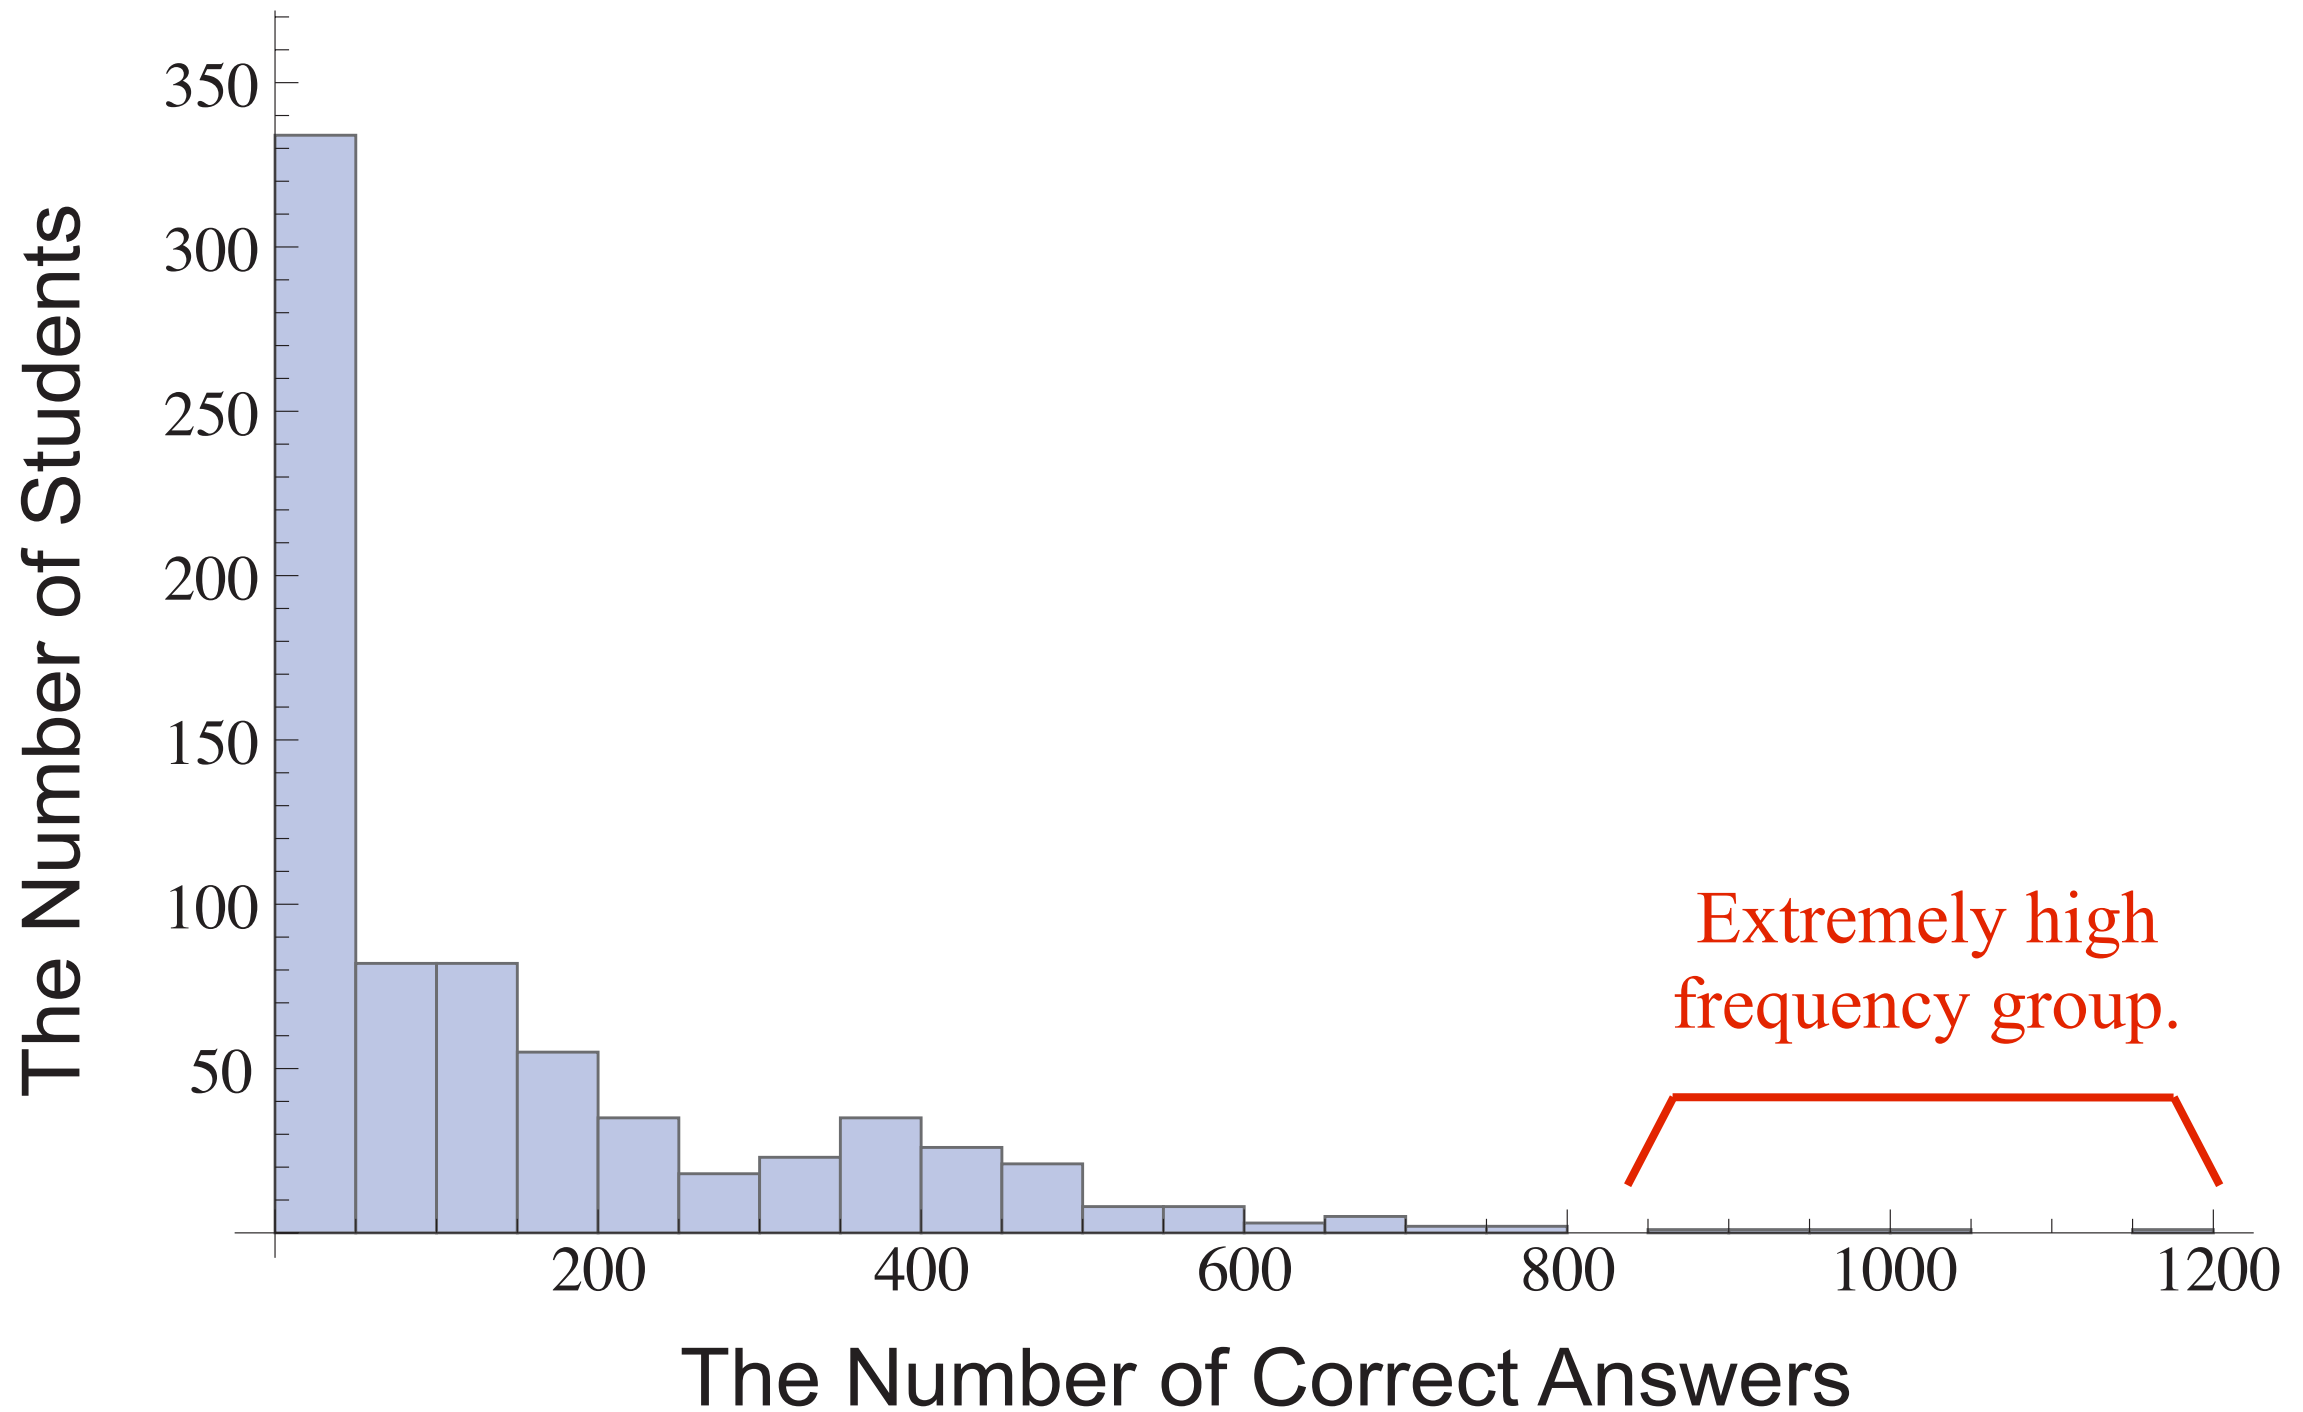

Frequency of use split by month (WMLS)

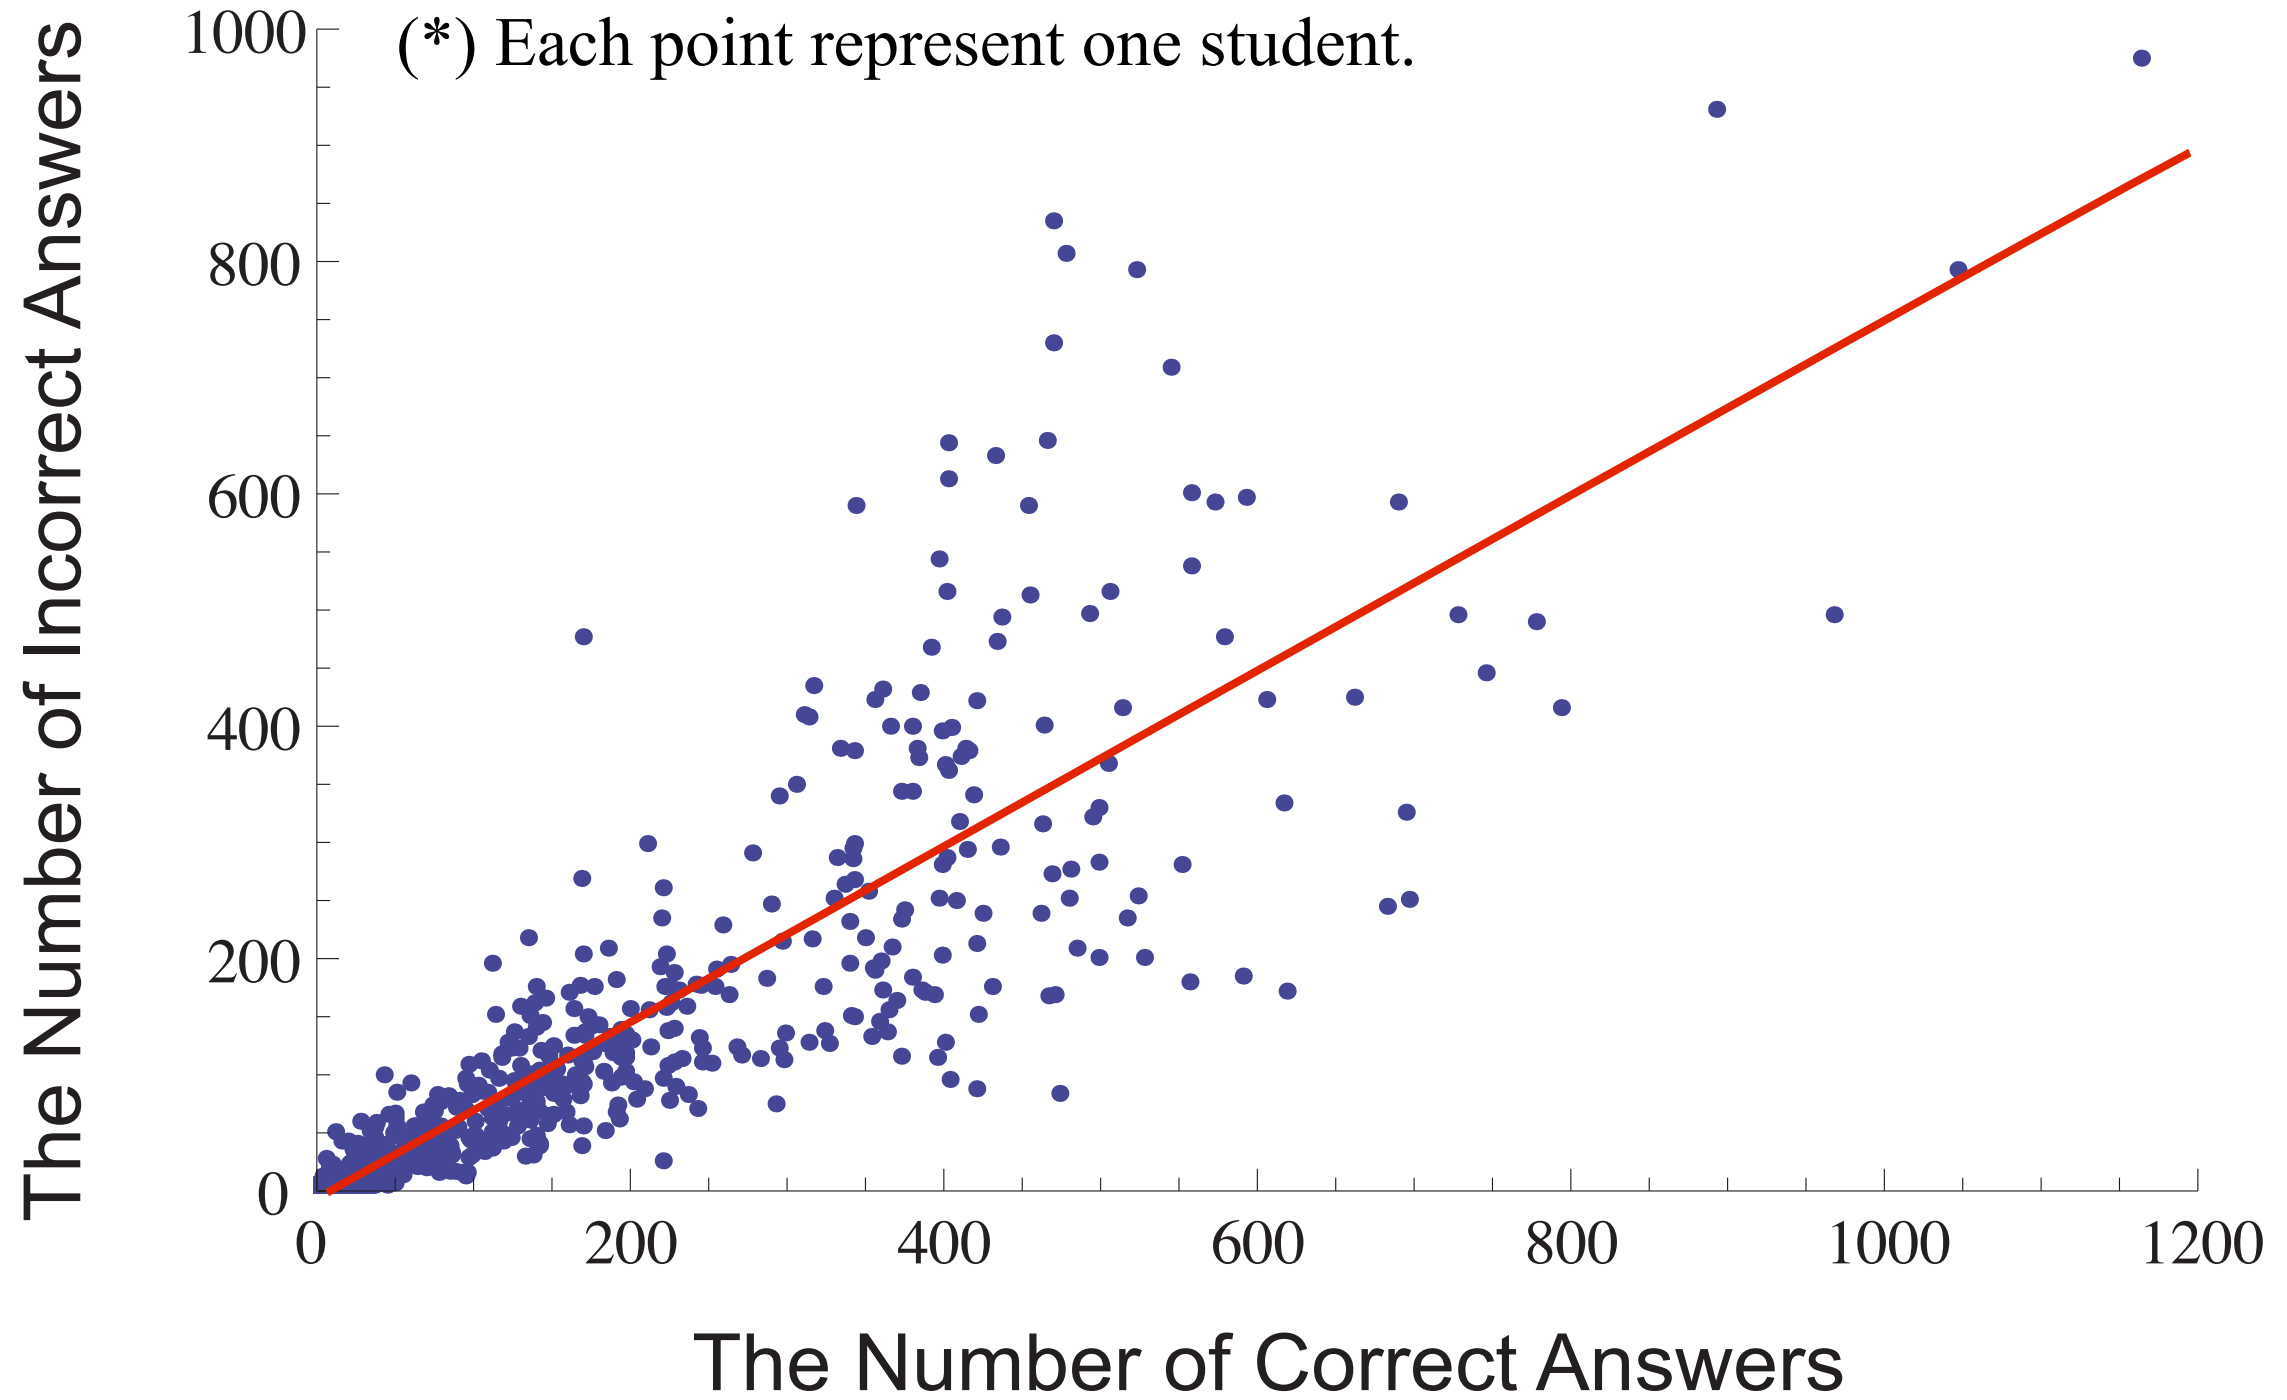

Frequency of use split by hour(WMLS)

The number of students and correct answers (WMLS)

The number of correct and incorrect answers (WMLS)

Effectiveness

- Questionnaire Survey on WASM -
(AY 2014, Fall)

Questionnaire survey on WASM (1)

- Linear Algebra course / AY2014 Fall -

Have you ever used MASM?

n=56

Questionnaire survey on WASM (2)

- Linear Algebra course / AY2014 Fall -

For whom replied YES in the question (1)

Why did you use the WASM?

n=53

- Because I was instructed to use it as retrying of mini-exams.
- Because I wanted to confirm my understanding
- NA

Questionnaire survey on WASM (3)

- Linear Algebra course / AY2014 Fall -

For whom replied YES in the question (1)

What do you think about the usability of the system?

- Very easy to use
- Easy to use
- Neither easy nor hard
- Hard to use
- Very hard to use

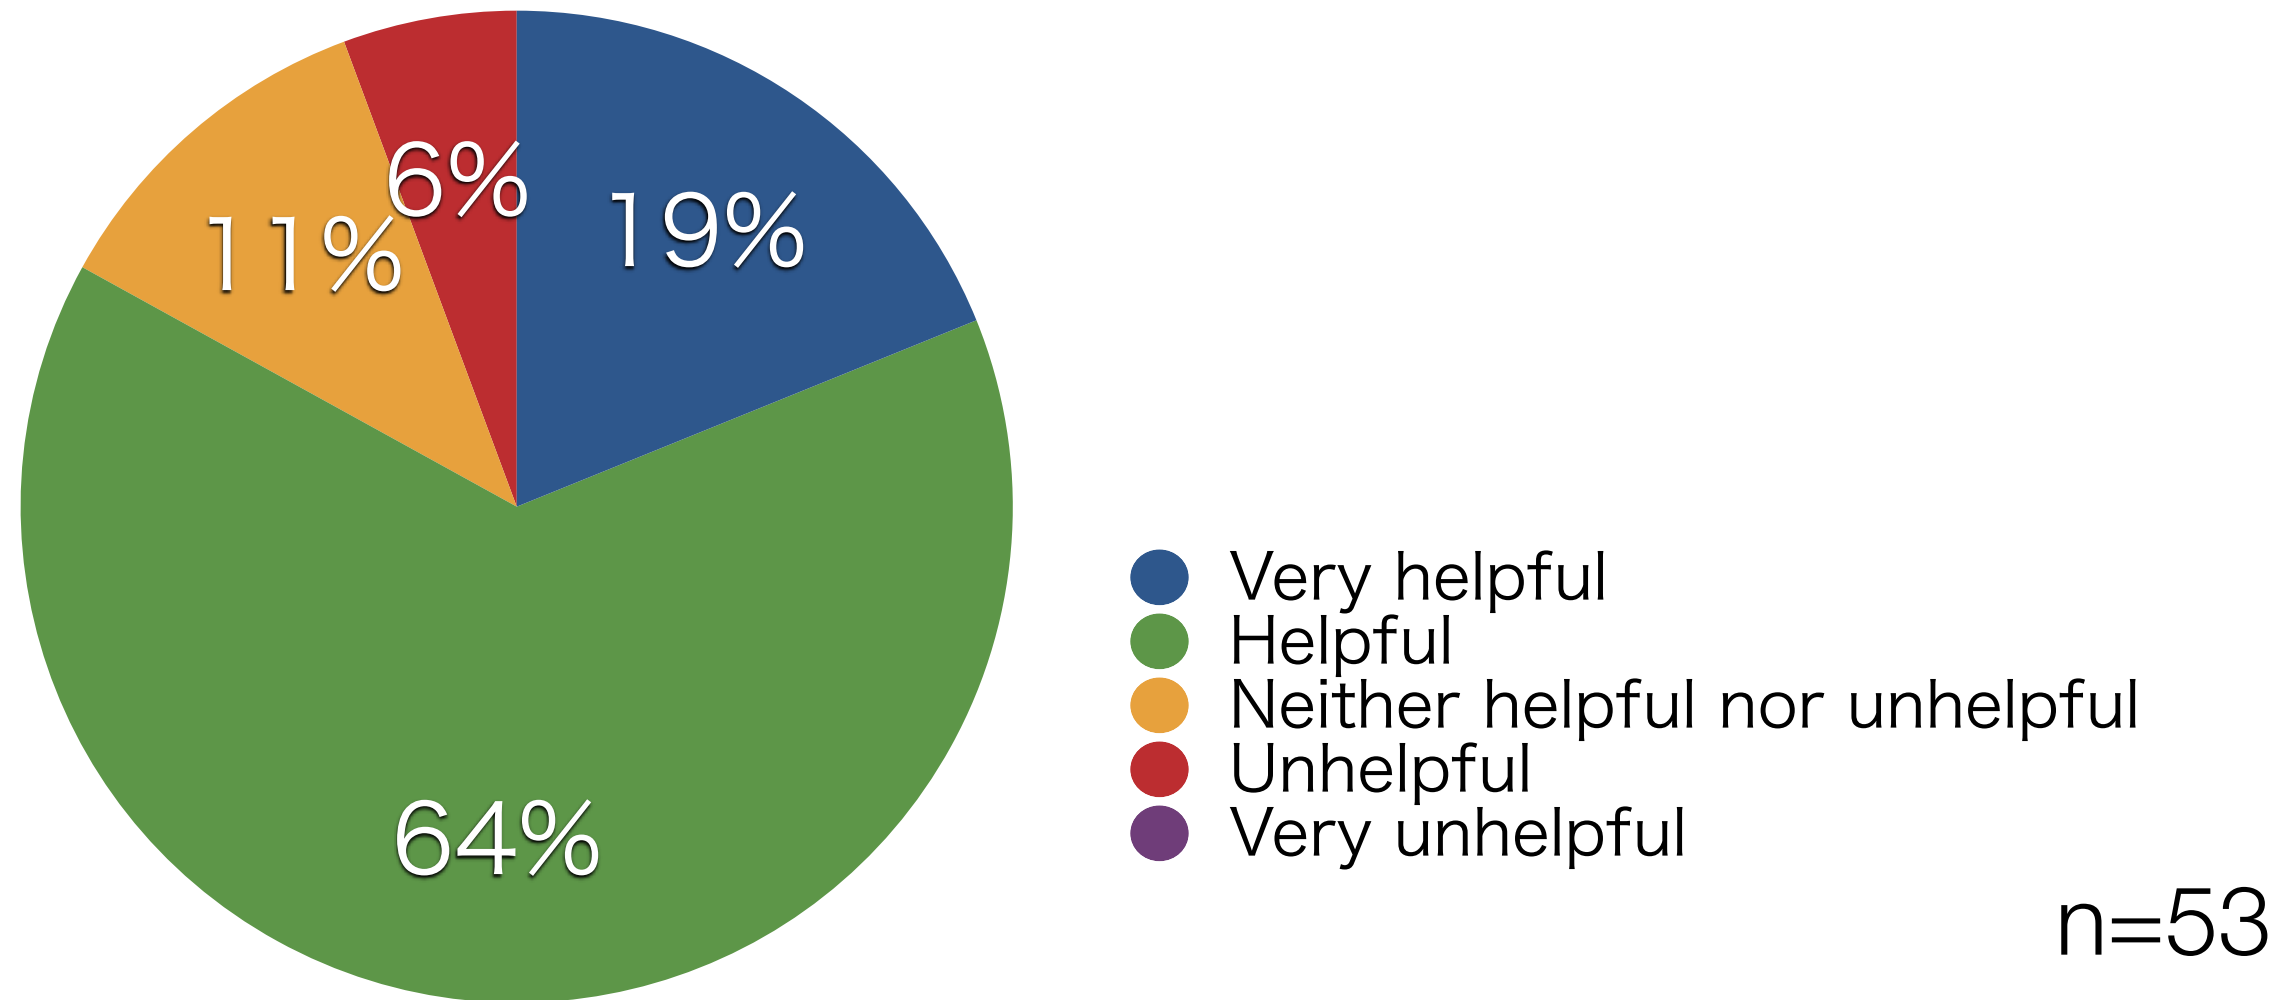

n=53

Questionnaire survey on WASM (4)

- Linear Algebra course / AY2014 Fall -

For whom replied YES in the question (1)

Do you think the system is helpful for mastering computational procedures and checking your understanding of mathematical concepts?

Data structure

Contents structures

- Parameters ... List of fixed or programmed (random) parameters.
The system decides randomly which parameter is used.
- Question text and answer form ... Html based text (JSP).
Parameters formatted by MSPFormat command (Image or MathJax)
- Judgement program ... Mathematica program using parameters and inputs.
Any style is available and return a code.
Typically Which[] is used. (first match semantic)
- Feedback message ... Consist of CSV of the codes and messages.
Codes are the return value above.
- Example question and how to solve it ... PDF files are linked.
To explain how to solve the problem.

Contents structures (overview via screenshot)

The screenshot shows a web-based interface for creating math problems. Several sections are highlighted with red boxes:

- 問題文 (*):** Contains HTML and LaTeX code for the question text, including a large font size for the main text: `<p>次の定積分を計算せよ.</p>`.
- 解答欄 (*):** Contains JavaScript code for the answer form, including a keypad and a form field: `$(function() { // 2013.08.05a if (typeof $.keypad != "undefined") { ...`.
- 解答欄チェック (*):** Contains JavaScript code for the judgement program, including a function to check the answer: `ans == Null, mrk=0, FullSimplify[ans - seikai]==0, mrk=1, True, mrk=2;ecd=1`.
- 問題パラメータ:** A table for defining parameters, with one parameter named 'mondai' defined as `{a = RandomChoice[{1/2, 1/3, 2/3}]; b = RandomChoice[{1/2, 1/3, 2/3}]; ToString[Sin[a*x] + Cos[b*x], InputForm], "0", "Pi/2"}`.
- 解答エラーメッセージ:** A table for defining feedback messages, with two messages: '0' (answer input) and '1' (incorrect answer).

etc...

Moodle plugin

Problems of the system

- Usability for the teachers : difficult to handle the learning status.
- An problem caused by upgrade of OS occurred at early in 2015.

Fortunately our university provides the LMS (Moodle).

Moodle plugin

(assisted by Nakahara)

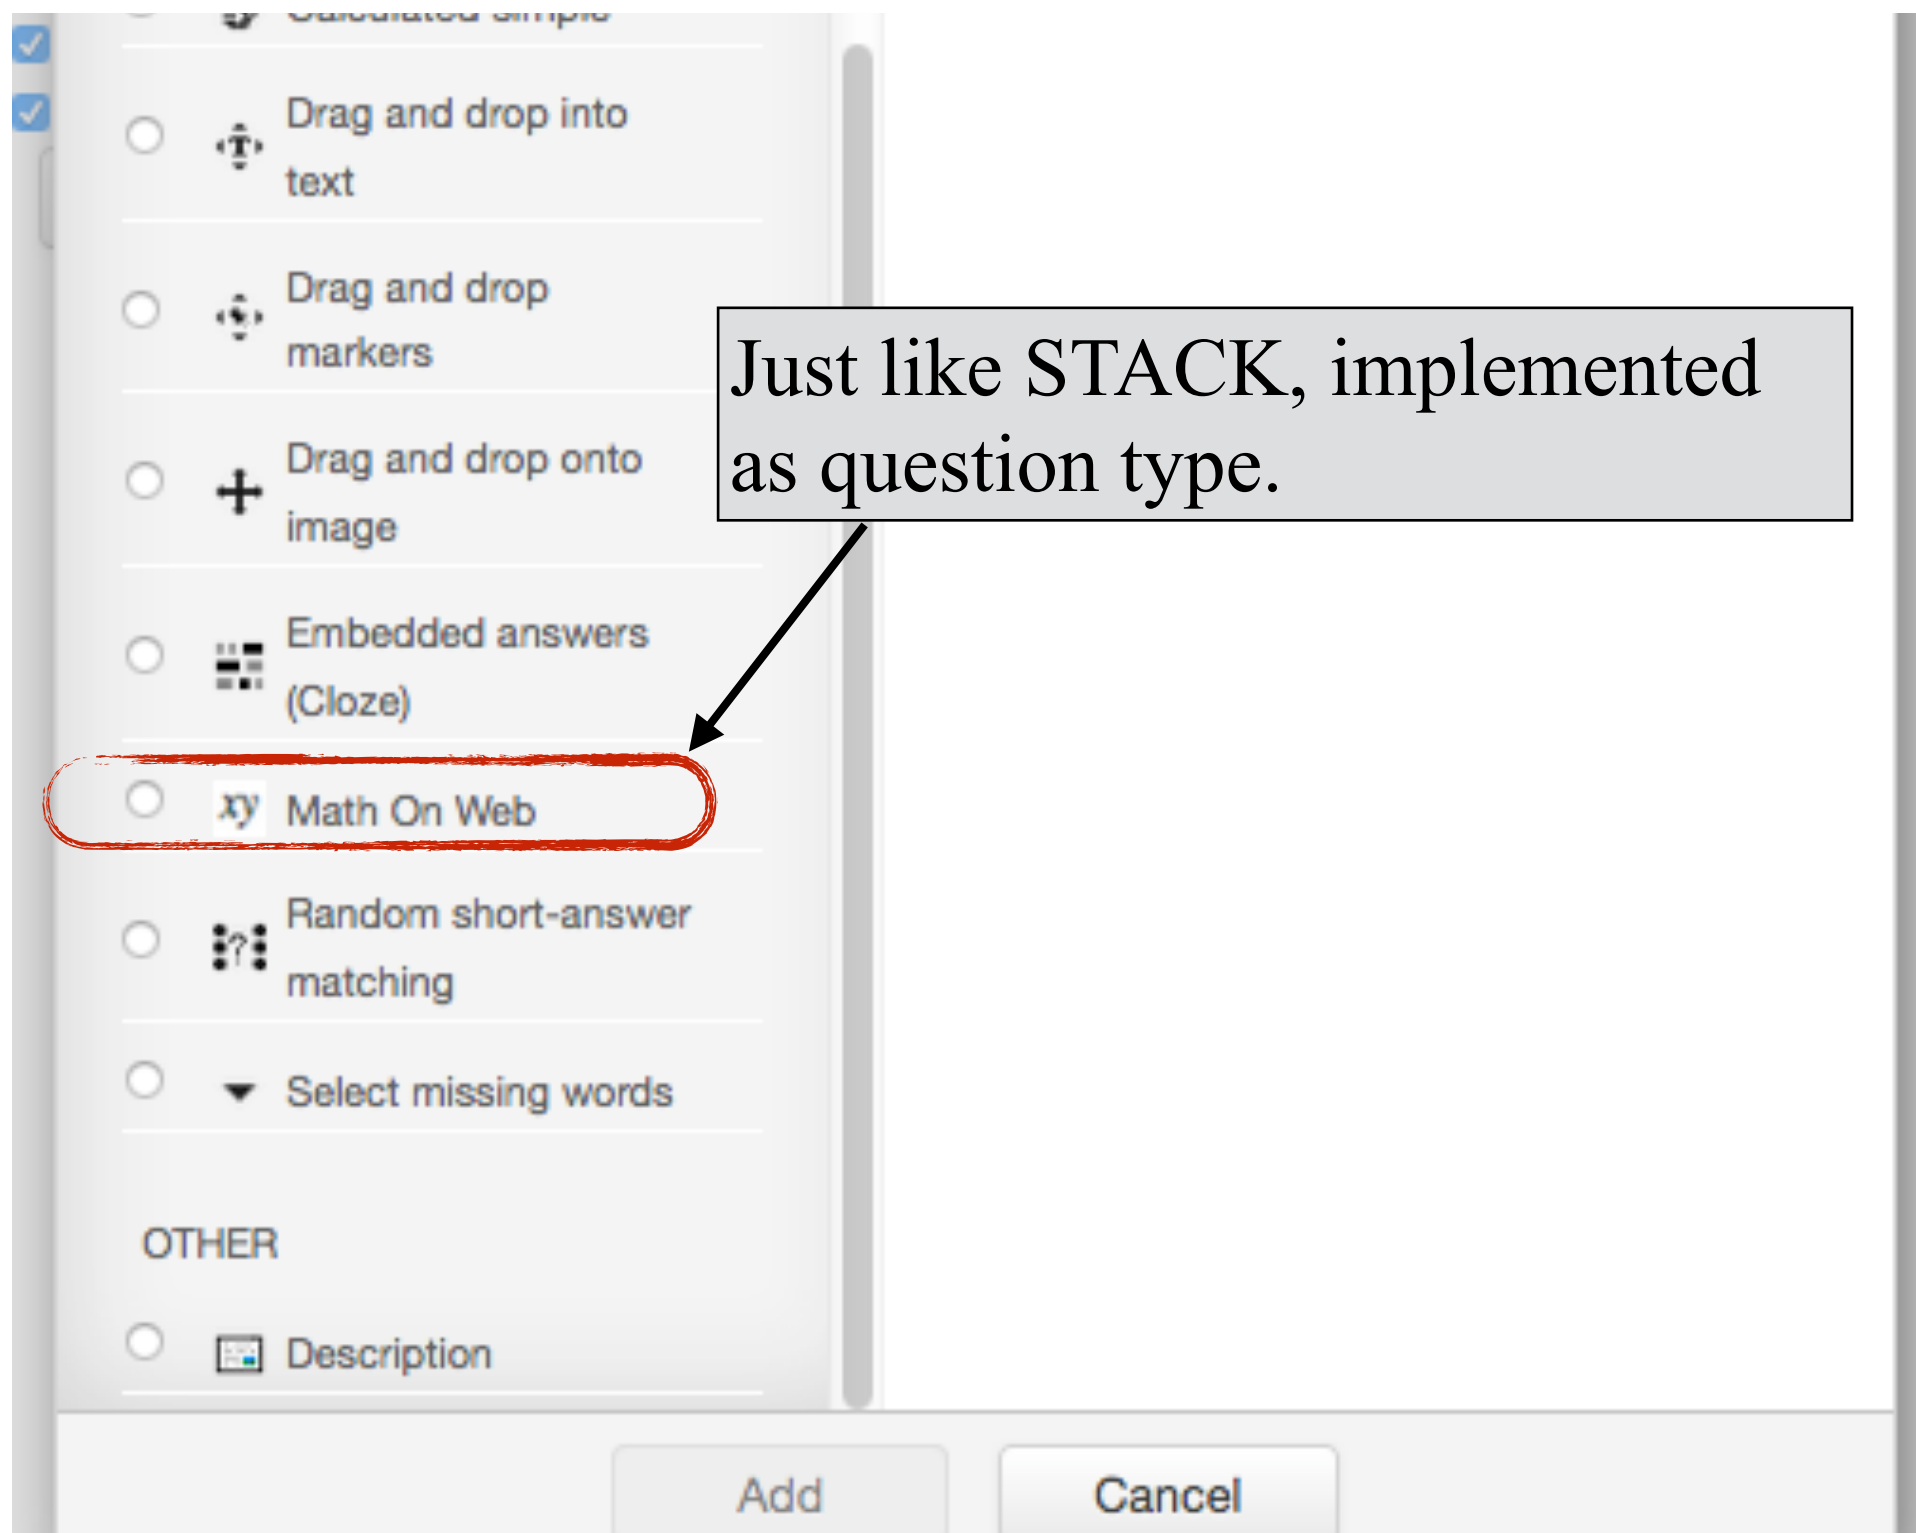

Spec :

- Full compatible with WASM w.r.t. question data.
- Network license of Mathematica required.

History and Plan :

- 2015 : Developed prototype (which can handle simple questions)
- 2016 : Bug fix.
Addition of function to import from WASM data archives.
Other improvements('LTI' may be included?).
- 2017 : Starting test use.
- 2018 : Starting practical use.

Screenshots

What we want to do

- We can use STACK 3.x in our university.
- We have already more than 1200 question data.
- BTW, there are so many drill or assessment systems.
e.g. Maple T.A. Numbas, DEWIS,...
- The question data is the key of such systems and should be shared.
- But how? Converter ?

Structures of the systems

	WASM	STACK	Notes for mutual use of contents data
CAS	Mathematica	Maxima	Number and kind of functions are different
Contents Structure	Question sentence Parameters Answer form Judgement program Feedback message	Question sentence including answer form Quest. variable PRT Sample answer	A little different, but almost the same, correspondence is clear
Language	JSP(HTML)/MathJax Mathematica formula	HTML/MathJax CAS Text (maxima)	Basically same as difference of CAS, outputs are different
Misc	Judgement only, no correct answer required	display a correct answer.	STACK is assumed to be prepared a correct answer.
	Code is full compatible with CAS(subset).	Supported command not fully compatible with CAS	Feedback variables fit for PRT should be computed.

Compare the contents data

<!-- 問題表示のための前処理 -->
<p><span style="font-size: 1.2em;">
<math>A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}, B = \begin{pmatrix} 5 & 6 \\ 7 & 8 \end{pmatrix}</math>
</span></p>
<math>stF = \text{mondai}[[2]]; st = \text{ToExpression}[stF];
edF = \text{mondai}[[3]]; ed = \text{ToExpression}[edF];</math>
```

Answer form

```
<script>
$(function() {
  if (typeof $.keypad == 'function') {
    $("#tbl").after(
      "<math>A \cdot B = ?</math>"
    ).keypad('destroy');
  }
});</script>
```

Judgement program

```
ecd=0;
Which[
  ans == N[
    FullSimplify[
      True, mrk=2;ecd=1
    ]
];
```

Parameters

```
{a = RandomChoice[{1/2, 1/3, 2/3}]; b = RandomChoice[{1/2, 1/3, 2/3}];
ToString["Sin[a*x] + Cos[b*x]. InputForm", "0", "Pi/2"]}
```

auxiliary variables

変数	必須	判定変数	解答変数	入力変数
mrk	<input checked="" type="checkbox"/>			
ans			<input checked="" type="checkbox"/>	
ans				<input checked="" type="checkbox"/>

Examples and its solution(PDF)

[mondai, ans, mrk, ecd]

Parameters

```
A:ev(rand(matrix([5,5],[5,5]))+matrix([2,3],[2,3],size(A)));
B:ev(rand(matrix([5,5],[5,5]))+matrix([2,3],[2,3],size(A)));
TA:ev(A.B,simp);
TD:ev(A*B,size(A));
```

Sentence and answer form

Calculate $\sqrt{A \cdot B}$

パス: p

Common message

To multiply matrices, the (i,j) th entry is the scalar product of the i th row of the first matrix and the j th column of the second matrix.

$\sqrt{A \cdot B} = \sqrt{C} = \sqrt{D}$

パス: p

Variable type, a correct answer, validity

Input: ans1

Fix dollars Replace \$...\$ with \(...\) and \$\$...\$\$ with \[...\] on save.

MeLQS

- Question data formats may be quite analogous even if the systems are different.
- We want to share question data among heterogeneous systems.
- Rather than a converter, it will be more useful to store the question data in accordance with more generic format.

‘Specification’ is the key of question data.

We call this
“Mathematics e-Learning Question Specification”
or ‘MeLQS’ for short.

Conclusion

- We have developed a *Mathematica*-based drill and assessment systems WMLS and WASM to create a blended learning environment.
- We have more than 1200 questions. We think the question data is the most important element of such systems and will be glad to disclose the data to the public, in a compatible format, like as XML.
- Aiming to share the contents data among heterogeneous systems, we suggested “**M**athematics **e**-Learning **Q**uestion **S**pecification”, which we call ‘MeLQS’ for short ([2014Y]).
- We are starting to survey how the ‘Specification’ should be, cooperating with Japanese STACK contributors, Y. Nakamura and T. Nakahara, and an Application Engineer for Maple T.A., K. Kato.

[2014Y] K.Yoshitomi, On a formulation of “Mathematics e-Learning **C**ontents Specification” and its applications to some systems, The 39th Annual Conference of JSiSE (Japanese Society for Information and Systems in Education) at Wakayama Pref.

Finally...

- By sharing the question data, all of teachers will be so happy.
- Even if they use any other system, they can concentrate to improve their class using questions shared and imported from MeLQS db.

If you are interested in the question data or MeLQS,
please feel free to contact us below :
